

General points

We are looking forward to your poster presentation at cAIR10. This guide aims to help you create a successful poster. The following points are obligatory:

1. **Submit your poster as pdf on A4.** (It will be printed on DIN-A0 = 84x119 cm.)
2. **Your poster must be vertical** ("portrait orientation"), like this - not horizontal ("landscape orientation").
3. **Write in good English.** If necessary, consider asking a Native speaker for help.
4. **Do not use font sizes smaller than 8** (on A4) – including all numbers in tables and graphs. (This text is size 9.)
5. **Use high-resolution photographs and logos** to permit enlargement to A0. The graph opposite could not be printed – it is not sharp enough.

Apart from that, please present your work as you consider appropriate. We hope that the following ideas are useful.

It's a good idea to include directly relevant photos. They break up the text and makes your poster more attractive.

Introduction

Introduce your research team and your work:

- What are your main fields of research?
- What are your most important recent achievements?
- How many people work there? Current projects?
- You are part of which Institution? Affiliations?

Detailed content: Some ideas

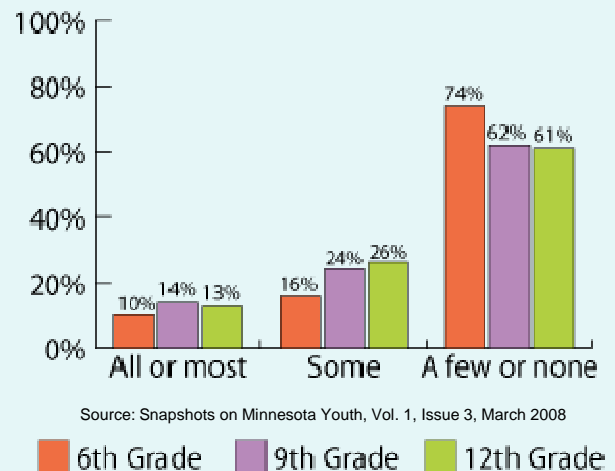

- What aspects of your research have practical relevance ?
- Is there a demonstrable effect on racism / xenophobia?
- What is the role of interdisciplinarity?
- What kind of support do you need for your work?

Layout

Write mainly in point form. Limit paragraphs to three lines. Leave space between paragraphs, like this.

- Either use this layout or (better!) invent your own
- At least change the colors! Make each poster unique
- Consider aesthetics: Balance? Matching colors?

Degree to Which Students Make Fun of Other Races/Backgrounds

Tables and graphs

- Include only directly relevant information
- Delete anything that most people will not read
- Avoid small font sizes (no smaller than 8 on DIN-A4)

Highlight the main points

- Help people to quickly see the main points (e.g. make a big contrast between headings and text)
- That will motivate them to stay and read the detail

Be concise

When revising the poster, keep looking for ways to say the same the same thing using fewer words and letters.

- Delete unnecessary words - then delete some more!
- Convert blocks of text into points (like this)
- Leave a lot of space between text (avoid clutter)

References

If you refer to publications in your poster, please list them at the end in font size 8 in a well-known format.
